● ABOUT MYSELF

Software Engineer specializing in frontend development with 4 years of experience building scalable web applications that drive business results. I help companies enhance user experiences and operational efficiency through data-driven solutions, having contributed to platforms serving manufacturing, analytics, and recruitment sectors across MENA and Europe.

● WORK EXPERIENCE

01/06/2025 - 31/01/2026 - BEIRUT, LEBANON

SOFTWARE DEVELOPER SIREN ANALYTICS

Data intelligence company providing digital transformation services to the public and private sectors across Lebanon and the Middle East.

- Engineered a multi-language translation system with React Query caching and bulk translation hooks, supporting the company's expansion into the European market.
- Secured application authentication by refactoring JWT expiry logic and eliminating race conditions in token refresh, preventing unauthorized access.
- Optimized application performance by integrating React Compiler and leading application-wide code splitting, reducing unnecessary re-renders and improving bundle efficiency.
- Led development of a multi-tenant AI chat module enabling users to query up to 300+ news sources per tenant conversationally, replacing manual content navigation across bulk-ingested datasets.
- Pioneered a real-time WebSocket notification system using SockJS/STOMP with throttled error handling, enabling instant cross-user threat flagging that navigates recipients directly to flagged content and related articles.
- Eliminated a class of runtime errors by establishing a TypeScript enforcement pipeline with strict ESLint rules and a pre-push hook, catching type inconsistencies before code integration.

01/05/2023 - 31/05/2025 - GIZA, EGYPT

MID-SENIOR FRONTEND ENGINEER GARMENT IO

SaaS solution helping labor-intensive manufacturing companies enhance productivity through real-time production floor data collection.

- Architected an i18n system with real-time language switching across Arabic, English, French, and Turkish, enabling product deployment across MENA and European markets.
- Modernized the build pipeline by migrating from Create React App to Vite, reducing production build time by 50% and improving local development speed by 5x.
- Introduced TypeScript and strict ESLint enforcement across a 6-year-old codebase spanning 10+ modules, hundreds of components, and 40+ pages through an incremental migration strategy, establishing type safety without disrupting active development.
- Implemented Sentry performance monitoring and Metabase BI dashboards tracking production productivity metrics — pieces completed, cycle times, and operational KPIs — across ~30 manufacturing facilities.
- Built a QR code scanning system for line managers, embedding machine IDs into scannable codes and eliminating manual machine lookup across ~30 manufacturing facilities.
- Resolved performance bottlenecks and memory leaks by converting sequential API calls to parallel execution, removing unused data fetching, and enforcing pagination on unbounded endpoints across data-heavy views.

01/11/2022 - 30/04/2023 - GIZA, EGYPT

FRONTEND ENGINEER ASGATECH

Custom software development company with 19-year MENA presence and offices across Saudi Arabia, UAE, and Egypt.

- Established a reusable component library with RTL support, creating a consistent design system that reduced new feature development time by 50%.
- Developed a multi-step registration form using React Context, submitting mandatory fields incrementally per step rather than in bulk — reducing backend load from incomplete submissions while streamlining the onboarding experience.
- Accelerated app startup speed by 35% through image optimization, lazy loading, and efficient API integrations.
- Executed full application internationalization with dynamic RTL switching, enabling product launch in Arabic and English markets

01/10/2021 - 01/07/2022 - ALEXANDRIA, EGYPT

FRONTEND ENGINEER AKWAD

Custom technology solutions and component library development company.

- Created a reusable form and grid component framework, standardizing development and reducing page build time by 90%.
- Delivered a complex MasterDetail system for asset and order management, enabling critical business workflows.
- Overhauled the core data grid infrastructure used across the majority of the system's forms and views, unifying pagination and search logic to eliminate inconsistent behavior and reduce bugs.
- Replaced silent failures with a centralized error handling system featuring user-facing toast notifications and admin oversight logs, increasing resilience and debuggability.
- Integrated internationalization and a dual-calendar date picker to support global product localization.
- Mentored two junior developers, increasing team productivity and reducing post-deployment issues.

● PROJECTS

Job Radar Building a fully automated job-hunting dashboard that scrapes 30+ companies across three pipelines (visa-sponsor, local, remote), scores results against a personal skill profile using regex gating and Gemini LLM analysis, and delivers filtered, ranked listings via a scheduled cron job and emails relevant job updates automatically. Features a market intelligence dashboard with 30-day trend tracking, skill co-occurrence analysis, and AI-generated application strategies per listing.

- Technologies: Next.js, TypeScript, Tailwind CSS, Supabase (PostgreSQL), Google Gemini API, Nodemailer

● SKILLS

React.js | JavaScript | TypeScript | Next.js | Redux/Redux-Toolkit | React Query / TanStack Query | Material-UI | HTML | CSS | Git | Bootstrap

Familiar Technologies

React Native | MobX | webpack | Node.js | Express.js | MongoDB | Jest | Vitest | React Testing Library | Web Socket | GraphQL | Sentry | Jira

● EDUCATION & TRAINING

01/10/2013 - 30/06/2017 - ALEXANDRIA, EGYPT

BACHELOR OF COMMERCE - FACULTY OF COMMERCE, ALEXANDRIA UNIVERSITY

Field(s) of study: Management Information Systems

● LANGUAGE SKILLS

Mother tongue(s): **ARABIC**

Other language(s): **ENGLISH**

● **CERTIFICATIONS**

01/08/2022 Udacity

React Development Cross-Skilling Nanodegree

Online - Hands-on React development: component design, hooks, state management, routing and deployment.

Links <https://drive.google.com/file/d/1DhUIm1A-6jISOGDuH4ogaGv5NpTHkn5A/view>

24/07/2022 FreeCodeCamp

JavaScript Algorithms And Data Structures

Online - Algorithmic problem solving in JavaScript: arrays, trees, graphs, sorting/searching and complexity analysis.

Links https://drive.google.com/file/d/1UKkoBa_jDCojkNZYofnDQBaBzHisfH1o/view

09/01/2021 Information Technology Institute

Full Stack Web Development using MEARN Track

Hybrid - Full-stack MERN/MEARN web development (MongoDB, Express, React, Node): REST APIs, auth, and deployment.
