ABOUT MYSELF

Software Engineer specializing in frontend development with 4 years of experience building scalable web applications that drive business results. I help companies enhance user experiences and operational efficiency through data-driven solutions, having contributed to platforms serving manufacturing, analytics, and recruitment sectors across MENA and Europe.

WORK EXPERIENCE

Siren Analytics - Lebanon, Beirut

Software Developer

[01/06/2025 - 31/01/2026]

Data intelligence company providing digital transformation services to the public and private sectors across Lebanon and the Middle East.

- Engineered a multi-language translation system with React Query caching and bulk translation hooks, supporting the company's expansion into the European market.
- Secured application authentication by refactoring JWT expiry logic and eliminating race conditions in token refresh, preventing unauthorized access.
- Optimized application performance by integrating React Compiler and leading application-wide code splitting, reducing re-renders and improving bundle size.
- Led the development of the AI Chat module, restructuring the module for scalability, which streamlined user workflows and data integrity.
- Pioneered a real-time WebSocket notification system using SockJS/STOMP with throttled error handling, enabling live collaboration features.
- Eliminated a class of runtime errors by establishing a TypeScript enforcement pipeline with strict ESLint rules and a pre-push hook, catching type inconsistencies before code integration.

Garment IO - Egypt, Giza

Mid-Senior Frontend Engineer

[01/05/2023 - 31/05/2025]

SaaS solution helping labor-intensive manufacturing companies enhance productivity through real-time production floor data collection.

- Architected internationalization (i18n) system enabling real-time language switching and accelerating the product's deployment to global markets.
- Engineered a migration from Create React App to Vite, modernizing core dependencies and streamlining the build process, which reduced production build time by 50% and improved local development speed by 5x.
- Pioneered the integration of TypeScript and established strict ESLint configurations across the codebase through an incremental migration strategy, establishing type safety for core utilities and enhancing long-term maintainability.
- Implemented Sentry performance monitoring and a business intelligence tool, which reduced issue resolution time and improved data-driven decision-making for operational workflows.
- Built a real-time QR code scanning and validation system accelerating accurate data capture on the factory floor and reducing manual entry errors.
- Eliminated performance bottlenecks and memory leaks by refactoring state management, parallelizing API calls with custom React hooks, and conducting comprehensive code reviews.

AsgaTech - Egypt, Giza

Frontend Engineer

[01/11/2022 - 30/04/2023]

Custom software development company with 19-year MENA presence and offices across Saudi Arabia, UAE, and Egypt.

- Architected a reusable component library with RTL support, establishing a consistent design system that reduced new feature development time by 50%.
- Engineered a complex multi-step form system using React Context, streamlining the user onboarding workflow and reducing backend server load.
- Accelerated app startup speed by 35% through image optimization, lazy loading, and efficient API integrations.
- Executed full application internationalization (i18n) with dynamic RTL switching, enabling product launch in Arabic and English markets.
- Elevated code quality and team efficiency by pair programming, which increased code standardization and reduced post-deployment bug reports.

Akwad - Egypt, Alexandria

Frontend Engineer

[01/10/2021 - 01/07/2022]

Custom technology solutions and component library development company.

- Architected a reusable form and grid component framework, standardizing development and reducing page build time by 90%.
- Engineered a complex MasterDetail system for asset and order management, enabling critical business workflows.
- Led a full refactor of the core data grid infrastructure, unifying pagination and search to minimize bugs.
- Implemented a centralized error handling system with user toasts and admin logs, increasing resilience and debugging speed.
- Integrated internationalization (i18n) and a dual-calendar date picker to support global product localization.
- Mentored two junior developers, increasing team productivity and reducing post-deployment issues.

PROJECTS

Job Radar Building a fully automated job-hunting dashboard that scrapes 30+ companies across three pipelines (visa-sponsor, local, remote), scores results against a personal skill profile using regex gating and Gemini LLM analysis, and delivers filtered, ranked listings via a scheduled cron job and emails relevant job updates automatically. Features a market intelligence dashboard with 30-day trend tracking, skill co-occurrence analysis, and AI-generated application strategies per listing.

- Technologies: Next.js, TypeScript, Tailwind CSS, Supabase (PostgreSQL), Google Gemini API, Nodemailer

Links: <https://github.com/mazenemam19/job-radar> | <https://job-radar-lyart.vercel.app/>

Trackstube Music streaming app with ad-free YouTube integration and social sharing features using GraphQL and Apollo Client.

- Technologies: React, JavaScript, Apollo Client, GraphQL, Material-UI

Links: <https://github.com/mazenemam19/React-GraphQL-Trackstube> | <https://trackstube.vercel.app/>

Cart E-commerce shopping cart application with robust state management using Redux Toolkit and TypeScript for type safety.

- Technologies: React, TypeScript, Redux Toolkit, React Router, Vite

Links: <https://github.com/mazenemam19/RTK-TS-Shopping-Cart> | <https://rtk-ts-shopping-cart.vercel.app/>

YelpCamp Full-stack campground review platform with authentication, authorization, image upload, cluster mapping, and comprehensive security features.

- Technologies: Node.js, JavaScript, Express, MongoDB, Mongoose, Mapbox, Passport

Links: <https://github.com/mazenemam19/Express-YelpCamp> | <https://yelpcamp-nl54.onrender.com/>

SKILLS

React.js | JavaScript | TypeScript | JavaScript Framework | Redux/Redux-Toolkit | React Query / TanStack Query | Material-UI | HTML | CSS | Git | Bootstrap

Familiar Technologies

Next.js | React Native | MobX | webpack | Node.js | Express.js | MongoDB | Jest | Vitest | React Testing Library | Web Socket | GraphQL | Sentry | Jira

EDUCATION & TRAINING

Bachelor of Commerce

Faculty of Commerce, Alexandria University [01/10/2013 - 30/06/2017]

City: Alexandria | **Country:** Egypt

Field(s) of study: Management Information Systems:

LANGUAGE SKILLS

Mother tongue(s): Arabic

Other language(s): English

CERTIFICATIONS

[Udacity , 01/08/2022]

React Development Cross-Skilling Nanodegree Hands-on React development: component design, hooks, state management, routing and deployment.

Mode of Learning: Online

Link: <https://drive.google.com/file/d/1DhUlm1A-6jISOGDuH4ogaGv5NpTHkn5A/view>

[FreeCodeCamp, 24/07/2022]

JavaScript Algorithms And Data Structures Algorithmic problem solving in JavaScript: arrays, trees, graphs, sorting/searching and complexity analysis.

Mode of Learning: Online
